

Adapt Engine Delta Release Notes

2025.1.1 - Apr-2026

Adapt Engine 2025.1 Delta 1 Release Notes

1

Note that this delta is largely a roll up of patches already deployed to either the US or UK systems.

Adapt Engine 2025.1 Delta 1 Release Notes

Description	Release Notes	Issue ID
Entity ownership with ALL group matching fails if user has any View only groups	Resolved an issue in Adapt Engine where users assigned to any View only groups could incorrectly receive a "No access" (US) or restricted view (UK) message when opening an entity's segments, if Entity Ownership in SysAdmin → Domain Settings was configured to ALL groups matching. The ownership check now correctly evaluates all user groups in this configuration, and eligible users can open entities and view the full segment list via the segment dropdown as expected.	AD-13223
Two users click on summary drop down receive No Access message.	Fixed an issue where some users could incorrectly receive a "No Access" message when using the summary/segment dropdown despite correct permissions.	AD-13225
In fast find search try to sort names by alpha order and nothing happens	Fixed Fast Find sorting not working in search results. Columns can now be sorted as expected.	AD-13226
In the profile area before the update the format was neat and organized. Now it displays as one big paragraph	Fixed text areas losing line breaks when viewed outside of edit mode. Profile text now displays with the intended formatting.	AD-13227
Candidates can't complete an I-9 form from Maximus	Fixed an issue preventing candidates from completing the Maximus/Compass I-9 form workflow. Candidates can now complete the form as expected.	AD-13228

Accented Characters	Fixed an export encoding issue affecting accented characters (e.g., "é") that could cause downstream rejections in third-party systems. Accented characters are now exported in the expected encoding.	AD-13229
Sysadmin Document library adding role to category fails with system error	Fixed a SysAdmin Document Library issue where editing/adding roles to a document category could fail with a system error. Role assignments now save correctly.	AD-13230
Error opening Journal Documentation category in entity document library	Fixed an error that could occur when opening the "Journal Documentation" category in the entity Document Library. Documents now load correctly.	AD-13231
Trying to create a candidate from an Outlook email into Adapt receive error	Improved compatibility when creating candidates from Outlook emails to prevent errors in the Outlook integration flow. Users should now be able to create candidates from email more reliably.	AD-13233
Config tools not working on Java21 for some users	In Java8, the config tools checked for a keystore in a specific location and if not found, it fell back to the default keystore. In Java21, if the keystore wasn't found it threw an error and aborted. To fix this, the network code for the config tools was rewritten and updated to use the modern Java21 HttpClient	AD-13244
In 2025.1 onwards, data retrieved via API is fixed to the dd/mm/yyyy format	Since Java 11, the short date format was brought in line with the Unicode consortium standard, and changed from dd/MM/yy to dd/MM/yyyy for many locales including UK. We have now patched this for the UK locale to revert the format back to the 2 digit year as the 4 digit year was breaking integrations.	AD-13238
Locking a Domain throws a System Error message	Fixed a SysAdmin error when locking domains introduced in 2025.1. Domains can now be locked/unlocked normally without manual SQL workarounds.	AD-13239
Config tools fail to connect to server for one client	Fixed a bug where config tools were failing after login due to unexpected cookies being found in the header. Config tools now load correctly from the toolbar.	AD-13237
SysAdmin AddressLookupProvider settings are not being picked up correctly	As part of the Java21 update, we enforced the use of enum keys for domain settings where the previous code had a mix of keys and strings. Unfortunately, one of the enum keys was mis-named, so this fix corrects that	AD-13278

Postcode lookup not working since move to Java21	The postcode lookup code made use of an Apache library called axis, however this library is long out of support and doesn't work correctly with Java21 so we had to replace it	AD-13277
SysAdmin Feedmanager saving feed doesn't always save the BO to run	SysAdmin Feed Manager sometimes not persisting the selected Business Object when its ID exceeded JavaScript's safe integer range. Feed configuration now saves consistently.	AD-13235
